

**Automation Specialist
Rockford Engineering Works Ltd.**

Job Advertisement

Rockford Engineering Works Ltd is seeking an **Automation Specialist** for our Rockford Automation Team. Our automation team is an integral part of the design team in helping Rockford meet its customers' requirements, but also has a self-directed objective to provide leading edge process automation solutions to a variety of industries. Working in a team environment, this position is responsible to provide:

- electrical design engineering services in areas of technical drawings
- program development & commissioning of a variety of automation components for the industrial sector including but not limited to PLC's, HMI's, & VFD's
- input into development of proposals, project acquisitions and project scope considering legislative and customer requirements
- project management support on behalf of Rockford or our customers
- on-site automation support for new and existing processes

Clients come to Rockford Automation for the technical expertise, electrical design services & EPCM services required to make the move towards original automation of processes or to improve / modify existing automated processes, as well as consultation & review of existing processes & machine safety. Our external and internal relationships are built on integrity and trust.

Our ideal candidate will be:

- Professional Engineer and/or Engineering Technologist, licensed to work in Saskatchewan (Applicants with credentials outside of these fields will be given consideration based on current level of automation experience)
- Knowledgeable and conversant in electrical circuitry & design, as well as programming, configuration & commissioning of a variety of components of automated processes
- Experienced in planning, executing, and completing all assigned tasks to schedule
- Able to identify and apply complex methodologies to define problems and analyze proposed solutions
- Experienced in project management methodologies and their appropriate application
- Knowledgeable of and have the ability to apply industry-related codes, standards, procedures and practices to complete process automation designs and control schemes
- Ability through diplomacy and tact, to negotiate, persuade and influence others to meet requirements and timelines
- Strongly oriented towards delivering top notch customer service
- Effective as a project design lead and/or team player in a diverse and dynamic work environment

If this matches your knowledge, skills and experience; and you have a customer service approach to your work, please apply with your resume and letter outlining your qualifications for this position.

Must be legal to work in Canada. Applications for this position will be accepted at hr@rockfordworks.com
